Enterprise Network Integration

Provides specialised enterprise network integration services to suit your business needs

Business Challenges

Today's network infrastructure is the backbone of your business, rapid growth and change has put a real strain on the demand for a more robust and reliable network infrastructure.

Based on your business requirements, we can help you to design, deploy, or manage scalable and secure network-centric solutions. To accommodate the ever-changing environment, we focus on open standard solutions that grow with your business. We can help you simplify your infrastructure by creating a converged network platform that will make information more accessible, available and manageable today, with the extensibility and built-in functionality to meet future business goals, without significant reinvestment.

Our Service Offerings

BT Frontline Enterprise Network Integration Services specialises in the fusion of business and technology. Our team of specialists is trained to look at the entire business and to design technology solutions that are specifically suited to a business' unique needs. We offer a full array of technology services including consulting and management services, project management, manufacturer-certified training, carrier services, telephony, equipment procurement and local and wide area network implementation.

Planning and Design

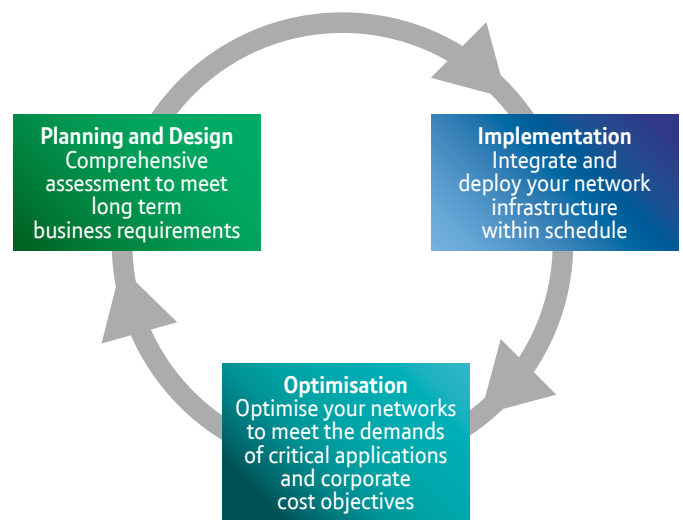

We provide a comprehensive assessment of your environment and long term business requirements to create a long term strategy that meet your needs today and with the scalability for future growth. Our technical team incorporates best practices and open standards to design your network infrastructure.

Implementation

We integrate and deploy your network infrastructure within schedule and ensuring successful adoption through knowledge transfer, training and user acceptance test.

Optimisation

By providing detailed information on usage trends, changes and problem areas, we can help you optimise your network infrastructure to meet the demands of your critical applications and corporate cost objectives.

BT Frontline's 3-prong approach in implementing enterprise network services

Our services include:

Building and Campus LAN/WAN

- Offer consultancy services for Building or Campus LAN/WAN network infrastructure solutions
- Provide deployment of enterprise network infrastructure such as cabling, racks, switches, routers, firewall and IDS/IPS
- Client or Clientless based Endpoint security?
- Secure, converged enterprise network for data and voice

Our services continued

Remote access

- Remote access solution via VPN or SSL VPN for remote offices or remote users across public or private network
- Various remote office WAN acceleration solutions to optimise bandwidth utilization

Wireless infrastructure

- Secured and scalable wireless network infrastructure solutions
- Wireless Identity-based security and wireless Intrusion Prevention

Application Delivery Network

- Load Balancer and traffic management for LAN and WAN deployment
- Content delivery and Web application accelerator

Key Highlights

- An organised approach to the execution of jobs
- Align application performance with your business priorities
- Helps build a network that is a strategic powerhouse
- High level of information and data protection
- Provides cost or efficiency advantages through wireless network.

Key Features

BT Frontline Enterprise Network Integration Services innovative solutions dramatically to improve operational efficiencies, increase organisational productivity, and enhance client satisfaction to create an empowered, effective work environment.

- **Project Management**

Our Project Management offers an organised approach to the execution of jobs of all sizes and complexities. Projects are managed to maximise return on investment through effective communication and a total commitment to customer satisfaction.

- **Bandwidth Management**

Left unchecked, streaming media and recreational Web surfing can clog your network and keep your mission-critical applications from doing their jobs and drive up bandwidth access costs.

Whether it's protecting mission-critical applications or controlling Peer-to-Peer application, we align application performance with your business priorities. You get maximum performance and value from the applications and technologies that power your business.

- **Network Integration**

It's the information age and the information that keeps your business humming is transmitted through your network. While it's never an easy task, our Network Integration Services help you build a network that is a strategic powerhouse. We artfully blend emerging technologies with your business goals and existing network infrastructure. The result — an integrated Web-based network that leverages technologies like voice, data and video and gives you a competitive advantage today and tomorrow.

- **Intrusion Protection**

With the increasing number of security threats, achieving efficient network intrusion security allows you to maintain high levels of protection and peace of mind. Our Intrusion Protection Service protects your data and information infrastructure. We use the latest technologies from top providers to ensure business continuity and to minimise the effects of costly intrusions on your network.

- **Wireless Network**

Wireless networks make it possible to speed business processes and improve service, reach new markets, and improve overall productivity—all while reducing IT and administrative costs. We can provide cost or efficiency advantages and what company functions it will benefit most.
